

May 1, 2007

The Honorable John D. Dingell, Chairman
The Honorable Joe Barton, Ranking Member
Energy and Commerce Committee
United States House of Representatives
2125 Rayburn House Office Building
Washington, D.C. 20515

Dear Chairman Dingell and Ranking Member Barton:

As officers and leaders of the Biotechnology Industry Organization's (BIO's) Emerging Companies Section (ECS), we are writing to express support for BIO's Principles for Follow-On Biologics. BIO's Emerging Companies Section includes more than 600 small biotechnology companies that are developing their first commercial product and have fewer than 350 employees – *80% of whom have fewer than 50 employees*. Attached as well are additional statistics about BIO's emerging companies and a list of companies.

We appreciate your interest in ensuring that the nation's citizens have access to safe and affordable biologics. Likewise, BIO's emerging company members are committed to the development of innovative therapies and making sure that patients have access to these treatments. Furthermore, BIO's smaller members believe it is critical that any legislation establishing a pathway for the approval of follow on biologics ensure that these products be safe and effective, and maintain incentives for innovation.

Congressional deliberations about developing an approval process for follow-on biologics should include all of the BIO principles (attached). While BIO's emerging companies are diverse in our business plans, we are cohesive in our support for these principles. We ask that you review these principles and use them as a measuring stick for legislation Congress may consider and as you examine the testimony submitted to the Committee for its recent hearing.

These principles contain the following elements:

- Ensure Patient Safety**
- Recognize Scientific Differences Between Drugs and Biologics**
- Maintain the Physician-Patient Relationship**
- Preserve Incentives for Innovation, including respect for intellectual property and other legal rights, non-patent data exclusivity and adequate notice and process rights**
- Ensure Transparent Statutory and Regulatory Processes**
- Continue to Prioritize FDA Review and Approval of New Therapies and Cures**

While all of these principles should be central to any statutory pathway for follow-on biologics, failure to provide for substantial data exclusivity and intellectual property protections will be particularly disastrous for emerging biotechnology companies. In the absence of existing product revenue, BIO's smaller member companies' ability to invest in cutting edge research is dependent on our ability to attract capital. It is especially important that small biotechnology companies have such access to capital, as such companies account for two-thirds of the industry's clinical pipeline.

The development of a new biotech therapy is a high-risk investment that is only undertaken based upon the expectation that a future FDA-approved product will provide an attractive return on investment. This process is a delicate balance between the inherently risky prospect of successfully bringing a biologic to market and its future potential. Some of the proposals being considered in Congress would disturb this balance, thereby making it more difficult for emerging biotechnology companies to attract capital. As is, a recent survey of 300 emerging biotech company Chief Executive Officers and Chief Financial Officers found that financial concerns and the ability to raise capital was by far the number one most frequently cited challenge facing their companies (cited by 43% of CEOs and CFOs.).

Emerging biotechnology companies are on the forefront of biomedical advancement and face significant hurdles in successfully delivering safe and effective innovative therapies for patients. It is essential that Congressional deliberations about developing an approval process for follow-on biologics be driven by responsible science, with a focus on protecting patient safety and preserving incentives to innovate, so that new pioneer biotechnology products continue to reach patients and physicians in a timely manner.

We look forward to working with you and your staff in order to ensure that any legislative proposal for follow-on biologics reflect these principles. On behalf of small, emerging biotechnology companies, we appreciate your consideration.

Respectfully Submitted,

/s/
